

PRO Series 8™

Trench Drain System

by NDS

Commercial grade non-sloped system for large water drainage.

The NDS 8" Pro-Series is a plastic trench drain system made from impact resistant PVC. The commercial trench system features two channel depths: 4.5" and 7.25". The shallow channel offers a special channel attachment for 3" side and bottom outlets, an advantage in situations where end outlets are not an option. The deeper channel has a 3" & 4" knockout outlet that attaches to S&D piping.

Options in grating give the 8" channel drain its flexibility and commercial status.

Accessories include end caps, end outlets & side outlets.
